

# KISAN DWAAR

किसान द्वार — a citizen's front door to Rajasthan's agriculture schemes

*Six questions instead of a login wall — and every consequential figure source-backed, or refused.*

---

Challenge: Revamp of Department of Agriculture Web Portal — Citizen-Centric Digital Front-End

YoDevStudio · Jodhpur, Rajasthan · 12 September 2026

PROPOSAL PROTOTYPE

[Live](https://yodevstudio.github.io/kisan-dwaar) yodevstudio.github.io/kisan-dwaar · [Source](https://github.com/yodevstudio/kisan-dwaar) github.com/yodevstudio/kisan-dwaar · [Tests](#)

# Rajasthan's backend works.

Federated identity, digitised land records and DBT already exist. This proposal criticises none of it — and could not exist without it.

## One layer is missing — the layer that makes the rest usable.

Eligibility rules are often written as sentences in pages and circulars. Until those rules are machine-readable, a portal can publish information — but it cannot reliably answer a citizen-specific “do I qualify?” question.

### THE DESIGN DECISION

**Keep Rajasthan's authoritative systems. Make the citizen-facing edge task-complete.**

### THE OFFICIAL MANDATE

Citizen-centric · mobile-first · multilingual · eligibility  
· services · analytics

# What that costs a farmer

In our anonymous test, roughly three substantive clicks reached the authentication wall — before any eligibility information was shown.

A farmer needs an SSO account merely to discover which applicant category applies to them.

Test scope: anonymous browsing only · one session/device class · 19 Aug 2026. We do not describe what happens after login.

# The measurement problem

Automated audits can pass while real keyboard navigation fails.

That is why Kisan Dwaar is judged by both automated scores and manual task walkthroughs.

SYSTEMIC MEASUREMENT GAP

# Six questions. One verdict. One next step.

No account. No login. No form. Eligibility works in the browser and remains available offline after the first load.

A farmer answers simple questions and receives apparent eligibility, required documents, next-step guidance and source provenance.

**The trust rule**

If the system cannot verify an exact consequential figure, it asks for the missing input or refuses to invent the number.

ASK

किसानों में किसान द्वाार है — राजस्थान की कृषि योजनाओं के लिए। आप अपना सरवात टाइट कर सकते हैं, या "सभी योजनाएं देखें" देखा सकते हैं।

REAL VERDICT CARD

1 - 2 हेक्टेयर

पात्र

राजस्थान तारबंदी योजना

आप राजस्थान तारबंदी योजना के लिए पात्र लग रहे हैं। तारबंदी लागत का 50% या अधिकतम ₹40,000, जो भी कम हो — प्रति कृषक 400 रसिंग मीटर तक अनुदान। योजना सामुदायिक आधार पर है, जिसमें न्यूनतम 5 हेक्टेयर भूमि व 3 किसानों का समूह आवश्यक बताया गया है। नज़दीकी ई-मित्र पर जाकर पुष्टि करें।

ज़रूरी दस्तावेज़:

- आधार कार्ड — ई-मित्र / आधार सेवा केंद्र
- जान आधार कार्ड — ई-मित्र
- जमाबंदी की नकल (छ: माह से अधिक पुरानी नहीं हो) — तहसील (राजस्व विभाग)
- बैंक खाते संबंधित विवरण — बैंक शाखा

किसी दस्तावेज़ में त्रुटि का लिए तहसील की ई-मित्र पर जाकर।

# The subsidy explainer

The strongest behaviour is not the calculation. It is the refusal to fabricate the missing input.

KNOWN FROM THE OFFICIAL RULE

**50% of fencing cost**

Maximum subsidy ceiling: ₹40,000

MISSING UNTIL THE FARMER PROVIDES IT

**Actual quotation / fencing cost**

Without it, the exact payable figure cannot be stated safely.

**So Kisan Dwaar shows the verified ceiling — and explicitly says what is still missing.**

REAL PRODUCT STATE

छोड़ दिया

### अनुदान की गणना

शर्त 1 — इकाई लागत का 50%

⚠ तार व सामग्री की अनुमानित/कोटेशन लागत कितनी है? (न हो तो छोड़ दें)

अभी बताएं

शर्त 2 — अधिकतम अनुदान सीमा

= ₹40,000 (तय सीमा)

**आपको अधिकतम मिल सकता है: ₹40,000**

सही राशि ऊपर बताई गई जानकारी दिए बिना नहीं बताई जा सकती।

सटीक राशि जानने के लिए नज़दीकी ई-मित्र पोर्टल पर पुष्टि करें।

स्रोत: <https://rajkisan.rajasthan.gov.in/WebsiteNew/fieldfencing.html> - जाँचा गया: 2026-08-22

"तारबंदी हेतु पेरीफरी (परिधि) कृषकों को लागत का 50 प्रतिशत अथवा अधिकतम राशि ₹- 40,000/- जो भी कम हो, प्रति कृषक 400 रनिंग मीटर तक अनुदान अनुज्ञेय है। सभी श्रेणी के कृषकों को लक्षित कर सामुदायिक आधार पर, जिसमें कम से कम 5 हैक्टेयर कृषि भूमि तथा 3 कृषकों का समूह होना आवश्यक है।"

# There is no model in the citizen decision path.

The brief asks for a rules-based assistant. Kisan Dwaar keeps entitlement decisions deterministic: no LLM, no inference call and no model-generated eligibility in the citizen request path.

---

## Static core

**Portal · discovery · eligibility engine · subsidy explainer · document checklist · registry**

Vanilla HTML/CSS/ES modules + JSON. No framework or build step in the citizen read path. Core eligibility remains usable after the first load even when services are unavailable.

## Services layer

**Authentication · document upload · analytics · application status · CMS**

Optional by construction and allowed to degrade. Official Rajasthan identity adapters remain a production integration boundary, not a prototype claim.

---

**A farmer with no account and no signal after first load can still reach a verdict and document list.**

# Not a prompt. Two guards, in code.

## Guard 1 — template guard

Assembled prose is checked for digit sequences that are not traceable to allowed scheme fields. Unsourced numbers trigger an error.

## Guard 2 — arithmetic provenance

Every computed number is tagged as sourced rule data, citizen input, or a named derivation. Derived values are re-computed before rendering; corrupted provenance throws.

Change the data, the answer changes. Change an unverified derived value, the guard throws.

### PROVENANCE VISIBLE TO THE CITIZEN

1 - 2 हेक्टेयर

✓ पात्र

**राजस्थान तारबंदी योजना**

आप राजस्थान तारबंदी योजना के लिए पात्र लग रहे हैं। तारबंदी लागत का 50% या अधिकतम ₹40,000, जो भी कम हो — प्रति कृषक 400 रनिंग मीटर तक अनुदान। योजना सामुदायिक आधार पर है, जिसमें न्यूनतम 5 हेक्टेयर भूमि व 3 किसानों का समूह आवश्यक बताया गया है। नज़दीकी ई-मित्र पर जाकर पुष्टि करें।

आपने बताया

आपका मतलब हमें बताएं

12 SOURCE-CITED SCHEME RECORDS

# Explainability, not confidence

A confidence score tells a citizen how sure a machine is. It gives them little to check.

## Every verdict can instead show:

- What the citizen told us
- Which rule clause was evaluated
- Which condition decided the outcome
- Source document + verification date

For unresolved inputs there is a named third state: NEED\_MORE\_INFO — not a guessed low-confidence answer.

## Reproducible, not confident.

▼ यह निर्णय कैसे लिया गया — ब्याख्या-योग्य निर्णय (XAI)

आपने बताया

# The portal is one consumer. The registry is reusable infrastructure.

api/v1/ exposes versioned scheme records as plain JSON:  
no login, no API key, source URL and verification date on every record, with field-level diffs between versions.

That means a kiosk tool, NGO interface or another departmental front end can evaluate the same reviewed rules instead of reinterpreting the same circular independently.

## KISAN DWAAR is the first consumer, not the only possible one.

Six Agriculture records + six related-welfare records already run on the same engine.

api/v1/schemes/RJ\_TARBANDI.json

```
{
  "scheme_id": "RJ_TARBANDI",
  "department": "Agriculture",
  "dataset_version": "2026.08.22-2",
  "source_url":

  "rajkisan.rajasthan.gov.in/.../fieldfencing.html",
  "last_verified": "2026-08-22",
  "eligibility": { ... },
  "subsidy_rule": { ... }
}
```

VERSIONED · SOURCE-CITED · MACHINE-READABLE

# All six Expected Outcomes — and the honest implementation status

| Expected outcome               | Status  | Where it stands today                                                                                                                              |
|--------------------------------|---------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Mobile-first, multilingual CMS | PARTIAL | Hindi/English mobile UI live. CMS authoring + publish path works; committed offline/fallback copy still needs a human update.                      |
| Rules-based AI chatbot         | LIVE    | Deterministic tap-to-answer discovery + typed Hindi/English/Hinglish routing. Zero LLM in the citizen decision path.                               |
| API-driven eligibility checker | LIVE    | Versioned machine-readable registry exposed at api/v1/ and used by the portal itself.                                                              |
| Secure document-upload module  | PARTIAL | Auth-gating, per-user paths and type/size rules exist. Scheduled deletion source exists but is not deployed; no dedicated citizen upload page yet. |
| SSO / Jan Aadhaar integration  | PARTIAL | Provider-agnostic OIDC-framed login works. Rajasthan SSO / Jan Aadhaar adapter awaits official sandbox credentials.                                |
| Analytics dashboard            | LIVE    | Usage + feedback counters and operational dashboard behind sign-in; collection limits are documented publicly.                                     |

# What KISAN DWAAR deliberately does not do

## ✗ Submit applications for citizens

It prepares citizens for official / assisted application channels.

## ✗ Persist identity in anonymous discovery

No name, ID, transcript or land record is required in the citizen read path.

## ✗ Promise money

It reports apparent eligibility and sourced rules — not a sanction order.

## ✗ Invent a missing cost

It asks for the quotation or shows the safe verified bound.

## ✗ Claim production Jan Aadhaar / Raj SSO

The adapter awaits official credentials.

## ✗ Hide unfinished work

Partial, blocked and not-built states are disclosed in UI and documentation.

## ✗ Use an LLM to decide eligibility

Consequential decisions come from deterministic reviewed rules.

*In a field full of “AI-powered, end-to-end, fully automated” claims, knowing exactly what not to fake is part of the product design.*

# The commercial case, without invented numbers

## Bandwidth & compute

Static delivery removes continuous inference cost from the citizen read path. Operating cost scales with hosting and traffic — not model calls.

**NO INFERENCE COST PER ELIGIBILITY CHECK**

## Time to deployment

The registry separates scheme modelling from portal releases. Once a rule is department-verified, it can be added, reviewed and tested independently.

**RULES CHANGE WITHOUT REBUILDING THE PORTAL**

## Scalability via protocol

The portal is one consumer. Operator tools, NGOs or other departments can evaluate the same versioned rules instead of duplicating interpretation.

**ONE REVIEWED RULE · MULTIPLE SURFACES**

## Compliance & audit

Deterministic rules produce reproducible decisions. Answers can carry the citizen input, deciding clause, source URL and verification date.

**AUDITABILITY BUILT INTO THE ANSWER**

# Team, and the ask

## THE TEAM

### Yogendra Singh Chouhan

Solo technical founder · Jodhpur, Rajasthan

Built Kisan Dwaar's citizen interface, rules registry, tests, service prototypes and submission end-to-end.

#### Earlier public work

**ShauchMap · VAANI — Rajasthan challenge prototype**

## THE ASK

- Grant staging credentials for Rajasthan SSO / Jan Aadhaar integration.
- Nominate a departmental rule owner for scheme verification.
- Map five additional high-priority schemes and validate the flow at selected assisted-service touchpoints.
- Measure task completion, clarification rate and citizen-reported usefulness in a controlled pilot.

**We would rather earn the second cheque than be given the first.**
